1	Introduction	4
2	Compound Design	5
2.1.	Components of the Recipe	5
2.2	Procedure for Compound Development	7
2.3	Types of Recipes	7
2.4	Mixing Equipment and the Mixing Process	10
3	Raw Materials	15
3.1	Elastomers	15
3.2	Fillers	33
3.3	Plasticizers, Softeners, and Processing Aids.	40
3.4	Aging, Fatigue, and Ozone Protective Agents	45
3.5	Vulcanization Accelerators	49
3.6	Miscellaneous Compounding Materials	52
4	Vulcanization Systems	55
4.1	Vulcanization Agents	57
4.2	Activators	61
4.3	Accelerators	62
4.4	Vulcanization Conditions	65
5	Rubber Industry Standards	67
5.1	State of Cure Tests	67
5.2	Hardness Test	69

5.3	Tensile Stress	70
5.4	Tear Resistance	71
5.5	Abrasion Test	71
5.6	Compression Set	72
5.7	Rebound Resilience Test	73
5.8	Accelerated Aging or Heat Resistance	73
5.9	Ozone Resistance	74
5.10	Exposure to Liquids	75
5.11	Fatigue Resistance	76
6	Classification System for Elastomers for Automotive Applications	77
7	Troubleshooting	83
8	Examples	94
9	Useful Tables	99
9.1	Density of Rubber Compound Materials	99
9.2	Commercial Rubber Compound Formulations and Properties	107
9.3	Abbreviations and Symbols	121
10	Further Reading	128
