
Original and aesthetic tubing applications wanted

The tubing producer polyvanced from Osnabrück, Germany, advertises the „polyvanced Design & Media Award 2010“. Interested participants are invited to submit their ideas regarding the application of tubing as an interior design element. A jury will assess the originality, aesthetics and feasibility of the designs. The winning design will be realised.

Tubing is versatile – it can be applied, for example, as a structural element in the interior of buildings or as an ornamental accessory in room decorating. Together with customers, suppliers, institutions and creative minds polyvanced constantly elaborates practical solutions with an added benefit. „Our polyvanced Design & Media Award is intended to additionally promote information and communication around the topic of tubing technology“, polyvanced CEO Dr. Robert Mayr says.

Polyvanced has advertised the „polyvanced Design & Media Award" at irregular intervals, focusing on various topics from the field of tubing technology. This time, ideas about the application of tubes in interior decoration will be assessed. Interested participants may submit their ideas by 14 January 2011. All information as well as the terms and conditions of the contest are provided at the homepage of polyvanced GmbH at www.polyvanced.com.

With polyvanced, ecological aspects, the considerate use of resources, and environmental compatibility are highest priority issues when it comes to process and product development, says the company. "Of course, these aspects will also be considered in the assessment of the submitted designs", Mayr says. The quality and environmental policy of the company is clearly laid out and summarised in a separate folder.
