

Polyurethanes: An Introduction – Science, Applications, Technology

The **Smithers Rapra** training course **Polyurethanes: An Introduction – Science, Applications, Technology** will take place twice this year in **Shawbury**, Shropshire, UK. Available course dates are **8 – 9 April 2014** and **4 – 5 November 2014**. The course provides a simplified explanation of the manufacture of PU, the generic chemistry, and how additives are used to achieve the modifications that make these materials so versatile. The structure of the PU supply chain will also be explained in relation to the process stage and application. The course can be used as a preparation for people intending to join the higher level “Understanding Polyurethanes” seminar.
