

Teknor Apex Company at Chinaplas 2011

Teknor Apex will highlight its recent acquisition of the Sarlink TPV elastomer range, already established in Asia for automotive and other applications.

UV-resistant grades of Sarlink TPV provide weight and cost savings for the roof seals of the new M6 seven-seat multipurpose vehicle built by Chinese BYD Auto.

Other TPE products will include styrenic and olefinic types based on multiple chemistries and used in all major markets. Also featured will be vinyl, nylon, and polyolefin compounds manufactured in Singapore and Suzhou, China. The booth is listed as that of Singapore Polymer Corporation, a Teknor Apex subsidiary (booth 10.2A11)
