
UTECH Europe 2012: Cannon

The latest in high and low pressure mixing heads as well as dosing units will be showcased by Cannon's international team of specialists during UTECH.

The new Vacuum Assisted Injection (V.A.I.) technology used in combination with Dow's Pascal chemical system will also be presented. Other technology for the production of PU insulation products, automotive components, and flexible slabstock can also be discussed at the event. The Cannon JL mixing head for more laminar flow, higher output, and with no injectors to calibrate or operate is available to meet the high expectations of refrigerator manufacturers. The complete range of products designed for Estrim (Epoxy Structural Reaction Injection Moulding) technology for the series production of composite parts will also be presented.
