

UTECH Europe 2012: Fecken-Kirfel

The German machine manufacturer Fecken-Kirfel will be promoting its “Loop” machine H 32 LF for the efficient cutting and looping of the complete range of flexible slabstock foams from polyether to viscoelastic.

In combination with the company’s software modules, these systems can reduce labour costs and foam waste. These software modules can be used for stand alone machines as well as for highly complex cutting lines.
