

Velox to introduce new masterbatch from Polyram

At the K-show 2010, Israel's biggest manufacturer of engineering thermoplastic compounds Polyram and the Hamburg-based raw materials distribution and sales company Velox will present Bondyram ADD1101BK.

The new product can be used as an additive pack in the PP long glass fibre thermoplastics (PP-LFT) and PP direct long glass fibre thermoplastics (PP-DLFT) moulding markets. The Bondyram ADD1101BK additive pack contains a combination of coupling agents and stabilisers, to meet the automotive demands under the ISO TS 16949 quality system.

In addition, Polyram manufactures besides standard and customised thermoplastics a group of products performing as coupling agents, impact modifiers and compatibilisers.

Polyram, hall 7-1, stand B52
Velox, hall 6, stand A23
