

APS adds Huntsman's Irogran and Avalon TPUs to its distribution portfolio

Alliance Polymers & Services, LLC (APS) is the newest North American distributor of Huntsman Polyurethanes' Irogran and Avalon thermoplastic polyurethanes (TPU). The materials are available in many grades designed from simple applications to complex engineering products.

APS is a privately owned thermoplastic elastomer distributor with warehouses and independent sales agents throughout North America, under the direction of two of the plastic industry's leading marketing and technical support executives, **Roger Huarng** and **Stephane Morin**, whom have earned a long-standing reputation for providing guidance on thermoplastic elastomer selections, the use of proper additives, and processing insights. "We are honoured Huntsman recognised our technical and commercial expertise in TPUs and chose us to represent them in the USA and Canada", said Huarng.

APS offers thermoplastic elastomer raw materials (TPE) such as styrenic-based thermoplastic elastomers (TPE-S), thermoplastic vulcanisates (TPV), thermoplastic polyester elastomers (COPE), and fluoropolymers (PVDF). "Our ability to source materials globally insures we provide quality elastomers at the most competitive pricing", said Morin. APS also manufactures and markets speciality compounds designed to enhance certain properties of the TPEs it sells.

Huntsman Polyurethanes serves customers in more than 90 countries and operates TPU manufacturing facilities in the USA, Germany, and China.
