

Krahn Chemie new distributor for Lanxess in Poland, the Czech Republic and Slovakia

The Lanxess High Performance Elastomers (HPE) unit has transferred its distribution business in Poland, the Czech Republic and Slovakia to Krahn Chemie Polska. The core products of this division are the technical rubber products CR, EVM, NBR and HNBR.

The portfolio of the HPE business unit includes Baypren polychloroprene rubber, Therban HNBR, the ethylene-vinyl acetate rubbers Levapren and Levamelt and the NBR types Perbunan, Krynac and Baymod N. The main fields of application for the products are in the areas of automobile manufacturing, mechanical engineering, the construction industry, gas/oil exploration and production, and the electrical and cable industries.

The elastomers are also used as modifiers for raw materials for plastics and adhesives. In addition to the synthetic rubbers from Lanxess, the Krahn Chemie Polska portfolio for the rubber processing industry also includes epichlorohydrin rubber (ECO), CPE, EPDM, FKM as well as additives and plasticisers.
