

Frimo: All services from a single source

Frimo Group will be present at K with all its business units covering the different plastics processing technologies from PU processing, flexible trimming, punching, pressing and forming, thermoforming, laminating, edgerefolding, and joining. Frimo offers for these processes tailor-made tools, machinery and equipment as single or complete solution from one source.

PURe EasyLine is a cost-efficient high pressure PU mix- and metering machine for processing all common non-filled two-component PU systems

For the PU industry the company offers a full product range for the processing of soft, semi-rigid, rigid and integral foams as well as for casting systems, filled systems and for PU spray applications.

Recently Frimo opened two new TechCenters, one in Lotte, Germany, and the other one within its North American headquarters in Wixom, MI, USA. In Europe, Frimo operates four fully equipped TechCenter facilities focused on special technologies while offering expertise and technical resources through the entire value chain. The one in Lotte today is the largest and most modern TechCenter of the group in Europe. Another facility is under construction in Shanghai, China.

The TechCenter in Wixom is a state-of-the-art customer support facility designed to meet the demands of the company's automotive interior customers and of customers in other industries. It provides tooling and production facilities for a complete range of processes used to develop interior products such as instrument panels, door trim, consoles, headliners, seats, headrests and more. The facility hosts an array of specialised equipment, including a **PUReline** polyurethane spray system as well as polyurethane rigid and semi-flexible foam-in-place metering equipment and tooling; **FlexTrim** router process equipment and fixturing; invisible air bag scoring equipment and fixturing and **EcoForm** and **VarioForm** thermoforming machinery and tooling; **JoinLine** infrared welding equipment and more.
