

Secmer: Low pressure dispensing machinery

The French company Secmer, part of the Baulé Group, will introduce its new low pressure dispensing range of machinery designed especially for use in the polyurethane CASE sector.

Dosamix two-component low pressure dispensing machine

The **Multicast** machinery series offers heavy duty, low pressure, low temperature dispensing machinery that can cope with between two and 13 components with an output of 5 g/min to 300 kg/min. The machine can process any cast resin or foam whatever the viscosity. The **Dosamix**, two-component low pressure dispensing machine is ideal for lab tests and can generate an output of 5 – 500 g/min of material.
