

PU TECH 2011: Polytec EMC

Polytec EMC, a manufacturers of low pressure dispensing machines, will participate as an exhibitor in PU TECH 2011 for the first time. The company manufactures two- and multi-component metering, mixing, and dispensing machines for liquid-reactive chemicals since more than 25 years.

dispensing machine

For the processing of PU, adhesives, sealants, PU hot cast elastomers, epoxy resins, silicones or foams Polytec EMC designs and builds customised solutions for nearly every requirement. Its portfolio includes the small laboratory and prototyping machine DG-10 for cold castable materials, the two- or three-component machines DG-107, DG-108, DG-105, and DG-103 for hot-casting applications as well as the fully automated and fully controlled multi-component series DG-200. At the show, Polytec EMC will introduce its new DG-130 and DG-150 series for the first time. Both machine series are designed as two- or three-component machines for all MDI/TDI/Mboca systems. Optional equipment like colour dosing, degassing, agitators or automatic refilling is also available.
