

Sanitized launches new product for foam and coating PU industry

Swiss Sanitized AG has launched a new product, Sanitized TPL 27-40, that can be used in the foam and PU coating industry.

This new product is said to exhibit excellent antibacterial, combined with a high antifungal activity. More interesting, it has an anti dust mite activity and is extremely wash resistant. "We bring new versatile multi-functional effects to the applications of our customers through research", says Bruno Piastra, Product Manager Polymer Additives.
