

Repi opens company in Russia

The Italian company Repi S. p. A. has recently opened its own company in Moscow, OOO Repi, following 12 years of work on the Russian market, the last five years of which through its own representative office.

Part of the OOO Repi team

According to Repi, the growing importance of the Russian market led to the decision to open the own Russian company. It offers full technical support, including colouration advice as well as just-in-time deliveries from the Moscow warehouse.

Repi says the new company holds a leading position in Russia for the supply of colourants and additives for PET preforms. It is also promoting its basic colourant technology for the extrusion of PVC profiles and panels. Other areas of growth cover colours for bi-component polyurethanes, epoxy resins, polyurea – as well as extrusion and calendaring of sheets, rotational moulding of PVC, and injection moulding of technically complex polymers, says Repi.

Repi offers liquid colourants and additives for plastics and polyurethanes, own dosing units for the use of its products, and technical service worldwide. The main fields of application for its products are packaging, automotive, furniture, construction, and footwear. The company's headquarters, production, and R&D centre are located near Milan, in northern Italy. In addition, it has subsidiaries in the USA and Russia. According to Repi, 75 % of its total production is exported into 60 countries.
