

Interep - Socatex: Closed cell expanded rubber

As an exhibitor at Rubber Street, the French company Interep – Socatex will showcase its portfolio of closed cell expanded rubber, which the company offers in blocks, sheets, rolls, and profiles.

Interep – Socatex
will exhibit at
Rubber Street at
K 2010

The block range includes rubber foams based on EPDM, CR (neoprene), NR (natural rubber), SBR, EVM, and NBR. Density varies from 60–500 kg/m³.

The profile range is focused on soft neoprene sponge rubber cords (diameter from 2–25 mm) and tubes, as well as special profiles of drawing. New this year are the EPDM sponge rubbers without sulphur (qualities 91-42 and 95-2). They are ideal materials to die-cut gaskets, seals and cushions in the automotive, lighting and electronic industries, according to the company. Zero sulphur content allows to eliminate the risk of corrosion by contact or emission with – in particular – silver components.
